

MUHAMMAD ALIYAN SIDDIQUI | Full Stack Developer

Karachi | +92 3293030091 | aliyaansiddiqui555@gmail.com

CAREER SUMMARY:

Full-Stack (MERN) Developer with 3.5+ years of experience (professional + freelancing) building scalable, secure, and user-friendly web applications. Skilled in e-commerce platforms, real-time apps, and authentication systems, with expertise in MongoDB, Express.js, React.js, Node.js, Stripe, and Socket.IO. Strong focus on clean code, problem-solving, and delivering modern, high-performance solutions that enhance user experience.

WORK EXPERIENCE:

Meteoric solutions | 01 February, 2024 – Present

- Built and deployed major projects including:

Farosh – Logistics Business Management Web Application

- Developed and optimized a comprehensive logistics management platform that streamlines supply chain operations.
- Built scalable and modular architecture capable of handling complex workflows, ensuring flexibility for businesses of all sizes.
- Implemented intuitive and user-friendly interfaces to enhance customer experience and simplify logistics process management.
- Enabled end-to-end visibility and control of logistics operations, empowering businesses to improve efficiency, reduce costs, and increase customer satisfaction.
- Integrated advanced data-driven features that provide actionable insights through real-time reporting and analytics dashboards.
- Collaborated in transforming traditional logistics systems into digital platforms, driving automation and operational excellence.

Questor – Real-Time AI-Powered Quiz Web Application

- Developed a real-time quiz platform enabling multiple users to join live quiz sessions simultaneously with seamless synchronization.
- Integrated AI-driven quiz generation to dynamically create intelligent and adaptive questions tailored to different topics and difficulty levels.
- Implemented advanced session handling and auto-reconnect features ensuring uninterrupted participation and progress tracking, even with unstable connections.
- Built secure and scalable backend services using modern frameworks, supporting high concurrency and real-time communication.
- Designed an engaging and interactive UI/UX with smooth animations and responsive layouts for an immersive quiz experience.
- Leveraged WebSockets/Socket.IO for instant updates, score tracking, and leaderboards during live sessions.

Delivered a digital-first learning solution that blends education and gamification, enhancing user engagement and knowledge retention.

Capital Stop – Full-Stack E-Commerce Platform

- Developed a complete e-commerce solution with Next.js, Stripe, and MongoDB, supporting dynamic products, categories, and states.
- Built a comprehensive admin dashboard for managing products, users, orders, and inventory in real time.
- Integrated Stripe payments for secure and reliable checkout functionality.
- Implemented Firebase Google Authentication for secure user login and profile management.
- Designed responsive and animated UI/UX using Framer Motion and Tailwind CSS.
- Optimized product media handling through Cloudinary integration.

Delivered a scalable and professional platform combining customer shopping, order tracking, and full admin control.

Freelancing project experience

- Built and deployed major projects including:

MovePixels 3D Interactive Visuals Platform

- Spearheaded the end-to-end development of a creative platform for 3D visuals, 2D animations, motion graphics, and product showcases.
- Designed and built a modern, visually engaging website featuring service sections, client portfolio, inquiry forms, and dynamic content modules.
- Implemented responsive layouts and interactive UI/UX to ensure accessibility across devices and deliver a professional digital presence.
- Showcased 3D product animations, VFX, CGI marketing ads, and motion design with optimized rendering for high-quality visual experiences.
- Integrated contact and inquiry forms to streamline client communication and project onboarding.
- Delivered a scalable, future-ready architecture with a focus on design aesthetics, usability, and performance.

TrendFumes – Premium Fragrance E-Commerce Platform

- **Full-Stack E-Commerce Development** Developed a complete e-commerce platform for premium fragrance retail using modern web technologies including Next.js 15, React 19, TypeScript, and MongoDB. Built scalable architecture with server-side rendering, API routes, and database integration to handle 500+ products with dynamic content management and real-time updates.
- **Comprehensive Admin Dashboard & Management System** Designed and implemented a feature-rich admin panel with complete business management capabilities including product catalog management, user administration, order processing workflows, inventory tracking, sales analytics with interactive charts, content management for banners and sliders, and system settings configuration with role-based access control.
- **Multi-Payment Gateway Integration** Integrated multiple payment methods including JazzCash and EasyPaisa mobile wallets, credit/debit card processing, and Cash on Delivery options. Implemented secure payment processing with SSL encryption, transaction validation, order confirmation systems, and multi-currency support (PKR, USD, EUR, GBP) with real-time exchange rate handling.
- **Advanced Authentication & Security Implementation** Built robust authentication system using NextAuth.js with Google OAuth integration, credential-based login, JWT session management, and bcrypt password hashing. Implemented role-based access control with admin, user, and moderator roles, secure API endpoints, and comprehensive user profile management with address storage.
- **Advanced Authentication & Security Implementation** Built robust authentication system using NextAuth.js with Google OAuth integration, credential-based login, JWT session management, and bcrypt password hashing. Implemented role-based access control with admin, user, and moderator roles, secure API endpoints, and comprehensive user profile management with address storage.
- **Dynamic User Interface & Experience Design** Created responsive, modern UI using Material-UI and Tailwind CSS with mobile-first approach. Implemented interactive features including dynamic product filtering, advanced search functionality, shopping cart with Redux state management, product review and rating system, and smooth animations using Framer Motion for enhanced user engagement.

Remlyo - Full-Stack Natural Remedy & Wellness Platform

Developed a comprehensive, community-driven web application focused on natural remedies and wellness information. The platform incorporates AI to enhance user experience and content quality. Key features include:

- **User & Profile Management:** Implemented secure JWT-based registration and authentication, detailed user profiles, and role-based access control to differentiate between users, writers, moderators, and admins.
- **Remedy & Ailment Management:** Designed CRUD functionalities for managing natural remedies, allowing user submissions, and a review system to ensure content efficacy and trustworthiness.
- **Content & Community Features:** Built an article system for in-depth wellness topics, integrated community interaction through comments, and established moderation tools for quality and safety assurance.
- **Subscription & Payment System:** Integrated Stripe for handling payments, developed tiered subscription plans, and implemented secure payment management with real-time event handling through webhook integration.
- **File & Media Management:** Leveraged Cloudinary for efficient storage and delivery of media uploads.
- **Notification System:** Developed multi-channel notifications, allowing user-configurable preferences, and automated alerts triggered by platform events.
- **AI-Powered Functionalities:** Utilized AI for content analysis, user feedback, smart recommendations, and content enhancement, improving submission quality and user engagement.

Delivered a scalable and innovative platform that combines modern web technologies to provide a valuable resource for wellness communities.

This addition highlights your expertise in developing complex, feature-rich applications, while also showcasing your skills in integrating AI and modern web technologies.

Integrated Tour and Travel Management System

A full-stack web application for a travel agency, designed to streamline operations, manage bookings, and enhance customer engagement. The system features a role-based architecture with distinct functionalities for administrators, travel agencies, service suppliers, and end-users.

- **Admin Dashboard:** Developed a comprehensive admin panel for user management, content moderation (blogs, FAQs), and system-wide settings configuration.
- **Agency Portal:** Created a dedicated portal for travel agencies to manage tour packages, view bookings, and interact with suppliers.
- **Supplier Dashboard:** Implemented a dashboard for service suppliers (e.g., hotels, transport) to manage their offerings and availability.
- **User-Facing Website:** Built the main customer website for browsing tours, making bookings, and managing personal accounts.
- **Booking & Payment System:** Engineered a complete booking workflow, from tour selection to secure payment processing via PayPal.
- **Search & Discovery:** Implemented advanced search and filtering capabilities to help users easily find tours based on destination, category, and price.
- **Real-time Chat:** Integrated a chat system for communication between users, agencies, and suppliers.
- **Marketing & Promotions:** Developed modules for creating and managing discounts and a referral program to drive user acquisition.

Elvis AI powered search engine

- Led the final development phase of a full-stack Next.js application, successfully engineering and implementing a secure, end-to-end user authentication system to prepare for production launch.
- Enhanced and finalized core application features by integrating complex backend APIs (AI chat, image processing) with a rich, interactive frontend built on a custom Shadcn/ui component library.
- Improved overall application stability and performance by identifying and resolving critical bugs across the codebase, ensuring a robust and reliable user experience for launch.

Full-Stack 3D Wood Panel Configuration & Visualization Platform

- **Interactive 3D Visualization Engine** Developed a cutting-edge 3D rendering system that enables real-time visualization of customizable wood panels. Built an immersive user experience with dynamic material mapping, smooth animations, and interactive controls allowing users to examine panels from multiple angles. Implemented advanced 3D model processing with custom material shaders and responsive transformations that adapt based on user selections, creating a professional-grade visualization platform.
- **Intelligent Multi-Step Configuration Wizard** Architected a sophisticated guided configuration process with advanced state management for complex user workflows. Designed an intuitive wizard interface that walks users through material selection, size customization, veneer specification, and final configuration. Built conditional logic systems and seamless navigation between steps, ensuring users can configure industry-standard wood panels with precise specifications and real-time validation.
- **Enterprise-Grade Material Management System** Created a comprehensive admin dashboard with complete data management capabilities for core materials and veneer options. Built a robust backend system with flexible data modeling and full CRUD operations. Implemented secure file upload functionality for material assets, supporting industry-standard veneer grading, grain matching patterns, and grade classifications used in professional construction projects.
- **Automated PDF Specification Generator** Engineered an advanced document generation system that automatically creates professional construction specification documents. The system captures all user configurations and generates detailed technical specifications, material lists, and project documentation. Implemented dynamic content rendering with custom layouts and professional formatting that meets construction industry standards and regulatory requirements.
- **Modern Full-Stack Architecture & Performance Optimization** Designed and implemented a scalable full-stack architecture with optimized performance and seamless user experience. Built responsive, mobile-first interface components with advanced error handling and real-time feedback systems. Optimized application performance through intelligent loading strategies, efficient state management, and seamless API integration, delivering a production-ready solution for the construction industry.

TECHNICAL SKILLS:

- **Frontend:** HTML5, CSS3, Tailwind CSS, JavaScript (ES6+), TypeScript, React.js, Next.js, Three.js, Babylon.js
- **Backend:** Node.js, Express.js, PHP, Socket.IO, RESTful APIs, Prisma ORM
- **Databases:** MongoDB, PostgreSQL, SQL, Firestore
- **Authentication & APIs:** Firebase Auth, Google Auth, GitHub Auth, Meta APIs
- **Payment & Integrations:** Stripe Integration, PayPal Integration
- **Cloud & Hosting:** Vercel, AWS, Hostinger, DigitalOcean, Cloudinary
- **Tools & Others:** Git, GitHub, VS Code, Postman, WebSockets, ORC
- **Basic Knowledge:** Python scripting & automation

Education

- Bachelor's Degree (Planned) Will begin Bachelor's program soon — Field of Study: Computer Science (2025)
- Intermediate (Pre-Engineering) Siraj-ud-Daullah Government Degree College, Karachi Year of Completion: 2025
- Matriculation (Science Group) Ameen Public Secondary School, Karachi Year of Completion: 2023
